Kenya (Open to Remote)

EDUCATION

BSc Computer Science

University of Nairobi
Graduated: 2019

PROGRAMMING

- Python
- JavaScript (ES6+)
- HTML5 / CSS3

DEVELOPMENT

- Full Stack Web Dev
- REST API Integration
- JSON / Async Programming
- Responsive Web Design
- WebSocket APIs

AI & DATA

- AI Response Evaluation
- Data Annotation & QA
- Prompt Engineering
- Technical Writing
- Research & Analysis

TOOLS

- Git & GitHub
- VS Code
- Google Workspace
- Microsoft Office
- Online Collaboration

SOFT SKILLS

- Critical Thinking
- Analytical Problem-Solving

WILLYS EMEJE WAFULA

Full Stack Developer · AI Data Specialist · Software Engineer

PROFESSIONAL SUMMARY

Computer Science graduate with hands-on experience in software development, automation, and AI data operations. Skilled in building web applications that integrate with external APIs to automate real-world processes, with a strong foundation in critical thinking, technical writing, and evaluating complex information with precision. Proven ability to work independently, deliver high-quality results remotely, and apply data-driven reasoning to solve challenging problems. Passionate about Artificial Intelligence and its practical applications.

EXPERIENCE

Full Stack Developer | Independent Projects2022 – Present Remote

Designed, developed, and deployed production-ready web applications integrating real-time APIs, automated data pipelines, and user-facing dashboards.

- Built three production-ready web applications that connect directly to a live trading platform via authenticated REST APIs, processing real-time market data and executing automated trade actions.
- Engineered a multi-indicator signal engine using 12 technical indicators (EMA, MACD, RSI, Bollinger Bands, ADX, Stochastic) to generate high-confidence trade signals with analytical precision.
- Designed clean, intuitive user interfaces for monitoring trade performance, account metrics, and market activity — prioritising UX clarity and data readability.
- Implemented robust error handling, input validation, and API authentication workflows to ensure application stability and security.
- Applied data analysis and statistical reasoning to transform live trading data into actionable insights and performance summaries.
- Maintained full version control discipline using Git and GitHub throughout all project lifecycles.

Software Engineer | Freelance & Contract2021 – Present Remote

- Delivered web applications, automation bots, and API integration solutions for clients across multiple freelance platforms.
- Produced technical documentation, requirements analysis, and software specifications for each project deliverable.
- Evaluated software outputs against quality benchmarks and client requirements — demonstrating QA and review capabilities

- Independent Work Ethic
- Attention to Detail
- Written Communication

aligned with AI training roles.

- Collaborated with clients remotely using structured communication, async workflows, and digital project management tools.

KEY PROJECTS

Deriv Smart Trader Pro | [Personal Project](#) 2023 – *Present*

- Full-stack browser-based trading terminal connecting to the Deriv.com WebSocket API with real-time data streaming.
- Built a 2-stage barrier-locked Auto Trader engine with a Kelly Criterion / Martingale session risk manager.
- Developed a companion Node.js/Express backend with SQLite, JWT authentication, and a REST API serving an admin SPA.

VOLTEX PWA | [Personal Project](#) 2023

- Progressive Web App targeting 5-tick HIGHER/LOWER binary contracts on synthetic indices.
- Built a Flask/Python backend bridge to resolve WebSocket API connectivity issues in pure client-side implementations.

CRM & Call-Center Web App | [Contract](#) 2024

- Conducted a comprehensive technical code review of a production CRM built with Vue 3 and Rsbuild, integrating a VoIP (Voice9/Keyou) SDK.
- Identified architecture patterns, security considerations, and optimisation opportunities across the codebase.

AI & DATA QUALIFICATIONS

Actively pursuing and applying AI training and data evaluation competencies relevant to platforms such as Scale AI, Outlier AI, Invisible Technologies, and Remotasks:

- AI response evaluation — assessing model outputs for accuracy, coherence, helpfulness, and safety alignment.
- Data annotation, labelling, and quality assurance across structured and unstructured datasets.
- Prompt engineering and evaluation — designing, testing, and scoring prompts for language model training pipelines.
- Technical writing — producing clear, structured documentation and research summaries for AI workflows.
- Research and fact-checking — verifying information accuracy with strong attention to detail.
